LFC-050-LE Light Flux Color and Luminous Efficacy Measurement Systems

The most economical and accurate solution for IESNA LM-79 and equivalent testing needs!

LightFluxColor-LE Series Systems are the most affordable and accurate systems for testing LED lighting products per the LM-79 standard. Whether you are a manufacturer of LED luminaires, street lights, solar powered LED lanterns, LED bulbs, or any other type of LED lighting product, LightFluxColor Systems will meet all your testing requirements. Test reports produced by following IESNA LM-79 and other equivalent standards not only make LED products comply with energy efficient lighting regulations but also provide confidence in quality of the product. LightFluxColor Systems allow luminaire manufacturers to test LED products per global testing standards, quickly launch their products to the market, and prove superior quality to their customers. The systems are not only required by manufacturers but are also essential for government labs, municipalities, and production facilities to ensure strict quality control and vendor qualifications.

LightFluxColor-LE Series Systems allow users to test AC/DC characterization of lamps at various input frequencies along with lumens and color parameters. Electrical lamp parameters such as power factor can also be tested.

The NIST traceable calibrated standard included with the system allows users to perform simple in-house system recalibration and verification without having to ship the system to our manufacturing facility. The system is available with 0.5 m, 1 m, 1.5 m and 2 m integrating sphere size options to accommodate LED chips as well as larger street lights. The integrating sphere is coated with Spectrafl ekt® coating which has up to 98% reflectance with perfectly Lambertian properties. The integrating sphere coating is highly durable and extremely stable, does not yellow over time, and doesn’t need periodic recoating. The integrating spheres are designed as per LM-79, BIS IS 16106:2012 and other equivalent standards to measure LED sources in both the 2 pi and 4 pi geometries.

Ideal For Flux, Color & AC/DC Electrical Characterization of:
- Automotive Lamps
- Traffic Lighting
- LED Clusters
- Architectural Lighting
- LED Bulbs
- Railway Lighting

LightFluxColor-LE Series Systems also include a highly sensitive mini-calibrated CCD Array Spectrometer with spectral range from 250 to 850 nm. This low noise and broad spectral response spectrometer provide instantaneous measurement of radiometric, photometric, and color characteristics of the LED sources.

The fast results from the spectrometer helps to increase the rate of product development, decrease the time to market, and reduce development costs.

Users of the systems are also able to perform absorption correction with standard LightFluxColor Systems and the system includes application specific software.

With ability to measure light source spectrum, luminous flux, electrical characteristics and complete color parameters with highest degree of accuracy and traceability. LightFluxColor Systems have the best value of all the LED measurement systems in the market.

Why Choose LightFluxColor
- Calibrations are traceable to NIST (USA) which are accepted and recognized globally.
- Calibrated lamp standards NVLAP accreditation Lab Code 200951-0 (ISO 17025)
- Spectral flux standards (calibration performed at each wavelength) are supplied with each system for highest possible accuracy.
- Single software controls all electronics and provides optical and electrical data.
- Competitor’s systems only provide luminous flux standards with CCT calibration which limits overall system accuracy.
- AC/DC operation in one packaged testing system
- An auxiliary lamp is provided for absorption correction and auxiliary correction is applied at each wavelength. This improves overall measurement accuracy as compared to other systems on the market.
- The integrating sphere is coated with Labsphere® Spectrafl ekt® coating that has up to 98% reflectance and is the highest Lambertian coating in the market.
- The sphere coating doesn’t yellow over time and doesn’t degrade in due course.
- The integrating spheres are designed per IESNA LM-79 standard and are capable of measuring in 2 pi and 4 pi geometries.
- Local support and training.

Light Measurement Software

Labsphere, Inc • 231 Shaker Street, North Sutton, NH 03260 • 603-927-4266 • www.lightfluxcolor.com
Key System Features

- Fully complies with IESNA LM-79 standard
- AC/DC operation
- NIST traceable calibrated standards for in-house recalibration NVLAP accreditation Lab Code 200951-0 (ISO 17025)
- Measurement of electrical parameters including power factor
- Measure absolute spectrum in milliseconds
- Comprehensive Light Measurement Software capable of measuring:
  - Total Spectral Flux (Watts/nm)
  - Luminous Flux (Lumens)
  - Luminous Efficacy (Lumens/Watt)
  - Radiant Flux (Watts)
  - Chromaticity (x, y, u, v)
  - CCT
  - CRI
  - Peak Wavelength
  - Dominant Wavelength
- Spectraflect® interior coating for sphere
- Absorption correction capabilities included

Detailed Technical Specifications

LFC-050 0.5 meter System includes:

- Light Measurement Sphere, 0.5 meter
- Spectrally Calibrated Lamp, SCL-600
- Auxiliary Lamp, AUX-50
- Calibration and Aux Lamp Socket Assembly
- Programmable DC Power Supply, M8811, 30V, 5A
- CCD Array Spectrometer (250 - 850 nm)
- Light Measurement Software
- System Manual and Electrical Rack
- AC Power Supply, Parwa APS6001L 0-300V,1KW
- AC Power Meter, TET P62201
- AC Power Supply, Chroma61603,0-300V, 1.5KW
- Power Meter, Yokogawa® WT210
- Relay Controller, Arroyo RC1

Also Available

- LFC-200/050-LEX (2 m and 0.5 m sphere systems with LEX rack)
- LFC-200/050-LES (2 m and 0.5 m sphere systems with LES rack)

This configuration includes a 2 m and 0.5 m sphere with shared electronic rack and suitable cables.
