Permafect® Reference Reflectance Targets

Proven performance in range

Permafect Lidar Targets are a complete reference reflectance solution for accurately testing range sensitivity at lidar wavelengths and accelerating your lidar system production.

Uniform spectral response and durable

Lidar sensing systems require greyscale reference reflectance targets to characterize range sensitivity. The reflectance targets you use to test your lidar system matter. Grey painted cards, fabrics, and paper leave you at a disadvantage.

There's a better solution, Permafect greyscale targets. Permafect diffuse reflectance coatings maintain their appearance under a wide variety of lighting environments and have uniform spectral response. They are thermally and physically durable, thermally color stable, and UV light stable. Permafect has no gloss, no polarization and no fluorescence.

Permafect Lidar Targets are scalable, reference reflectance targets, on rugged lightweight backing material. If you're an automotive OEM or supplier and require a durable absolute reflectance target for characterizing the range sensitivity of your lidar system, our Lidar Targets are right for you.

Lidar Targets are 18.5 - 25.4 mm thick and consist of an aluminum honeycomb network sandwiched between two sheets of aluminum. The material design provides a mechanically flat, rugged, and lightweight target backing solution available in four standard target sizes; 0.5 m x 0.5 m, 1.0 m x 1.0 m, 1.5 m x 1.5 m, and 1.2 m x 2.4 m, with or without mounting.

No other options compare:

- Lightweight
- Durable
- Tailorable
- Uniform
- Easy to Clean

Applications:

- Lidar
- Sensitivity and range
- Time of Flight

Results you can trust

All Permafect targets include reflectance data. Lidar targets are calibrated at the wavelengths that matter most for lidar testing.

Lidar Targets include a calibration report of the average spectral reflectance at 850 nm, 905 nm and 1550 nm.

The average reflectance values are calculated from nine individual measurements collected in a grid across the target surface.

All Lidar Targets include 850 nm, 905 nm and 1550 nm reflectance uniformity maps. Your target will ship with a calibration certificate, uniformity map, and pdf files on USB.
